

AQA 85852 GCSE Food Preparation and Nutrition Specification – course content.

3.2 Food Nutrition and Health	
3.2.1 Macronutrients	
3.2.1.1 Protein	
<ul style="list-style-type: none"> low and high biological value proteins protein complementation protein alternatives e.g. textured vegetable protein (TVP), soya, mycoprotein and tofu. 	<ul style="list-style-type: none"> the functions main sources effects of deficiency and excess related dietary reference values.
3.2.1.2 Fats	
<ul style="list-style-type: none"> saturated fats unsaturated fats (monounsaturated and polyunsaturated). 	<ul style="list-style-type: none"> the functions main sources effects of deficiency and excess related dietary reference values.
3.2.1.3 Carbohydrates	
<ul style="list-style-type: none"> starch (polysaccharides) sugars (monosaccharides/ disaccharides) dietary fibre. 	<ul style="list-style-type: none"> the functions main sources effects of deficiency and excess related dietary reference values.
3.2.2 Micronutrients	
3.2.2.1 Vitamins	
<ul style="list-style-type: none"> Fat soluble vitamin A vitamin D vitamin E vitamin K. 	<ul style="list-style-type: none"> the functions main sources effects of deficiency and excess related dietary reference values.
<ul style="list-style-type: none"> Water soluble B group – B1 (thiamin), B2 (riboflavin), B3 (niacin), folic acid, B12 vitamin C (ascorbic acid) loss of water soluble vitamins when cooking (B group and Vitamin C). 	<ul style="list-style-type: none"> the functions main sources effects of deficiency and excess related dietary reference values how preparation and cooking affects the nutritional properties of food.
Antioxidant functions of vitamins <ul style="list-style-type: none"> vitamin A vitamin C vitamin E 	The role of antioxidants in protecting body cells from damage.
3.2.2.2 Minerals	
<ul style="list-style-type: none"> calcium iron sodium (salt) fluoride iodine phosphorus. 	<ul style="list-style-type: none"> the functions main sources effects of deficiency and excess related dietary reference values.

3.2.2.3 Water	
The importance of hydration and the functions of water in the diet.	<ul style="list-style-type: none"> • functions of water to eliminate waste from the body, cooling and for digestion • how water is lost from the body • how much water/ fluid is needed each day • occasions when extra fluids are needed.
3.2.3 Nutritional needs and health	
3.2.3.1 Making informed choices for a varied and balanced diet	
<ul style="list-style-type: none"> • the current guidelines for a healthy diet • portion size and costing when meal planning • how peoples' nutritional needs change and how to plan a balanced diet for different life stages • how to plan a balanced meal for specific dietary groups • how to maintain a healthy body weight throughout life. 	<ul style="list-style-type: none"> • the current guidelines for a healthy diet e.g. Eatwell Guide • nutritional needs for the following life stages: young children, teenagers, adults and the elderly • how to plan a balanced meal for specific dietary groups: vegetarian and vegan, coeliac, lactose intolerant and high fibre diets.
3.2.3.2 Energy needs	
<ul style="list-style-type: none"> • the basal metabolic rate (BMR) and physical activity level (PAL) and their importance in determining energy requirements • the recommended percentage of energy intake provided by protein, fat and carbohydrates (starch and sugar). 	<ul style="list-style-type: none"> • factors which affect the BMR, such as age, gender and PAL. Their importance in achieving energy balance • the percentage of recommended energy sources from nutrients: <ul style="list-style-type: none"> • protein 15% • fat 35% or less • carbohydrate 50% (of which 45% from starches, lactose in milk and fruit sugars and a maximum of 5% from free sugars).
3.2.3.3 How to carry out nutritional analysis	
How to plan and modify recipes, meals and diets to reflect the nutritional guidelines for a healthy diet.	<ul style="list-style-type: none"> • how to use current nutritional information and data e.g. food tables, nutritional analysis software to calculate energy and nutritional value.
3.2.3.4 Diet, nutrition and health	
<ul style="list-style-type: none"> • the relationship between diet, nutrition and health • the major diet related health risks. 	<ul style="list-style-type: none"> • how diet can affect health and how nutritional needs change in relation to: <ul style="list-style-type: none"> • obesity • cardiovascular health (coronary heart disease (CHD) and high blood pressure) • bone health (rickets and osteoporosis) • dental health • iron deficiency anaemia • Type 2 diabetes.

3.3 Food science

3.3.1 Cooking of food and heat transfer

3.3.1.1 Why food is cooked and how heat is transferred to food

- the reasons why food is cooked
- the different methods of heat transfer.

- food is cooked to:
- make food safe to eat
- develop flavours
- improve texture
- improve shelf life
- give variety in the diet
- how preparation and cooking affect the appearance, colour, flavour, texture, smell and overall palatability of food
- how heat is transferred to food through: conduction • convection • radiation.

3.3.1.2 Selecting appropriate cooking methods

Selection of appropriate preparation, cooking methods and times to achieve desired characteristics.

- how the selection of appropriate preparation and cooking methods can conserve or modify nutritive value or improve palatability:
- water based: steaming, boiling, simmering, blanching, poaching, braising
- dry methods: baking, roasting, grilling, dry frying
- fat based: shallow frying, stir fry
- how preparation and cooking affect the appearance, colour, flavour, texture, smell and overall palatability of food e.g.
- the use of marinades to denature protein.

3.3.2 Functional and chemical properties of food

3.3.2.1 Proteins

- protein denaturation
- protein coagulation
- gluten formation
- foam formation

- the scientific principles underlying these processes when preparing and cooking food
- the working characteristics, functional and chemical properties of proteins.

3.3.2.2 Carbohydrates

- gelatinisation
- dextrinisation
- caramelisation

- the scientific principles underlying these processes when preparing and cooking food
- the working characteristics, functional and chemical properties of carbohydrates.

3.3.2.3 Fats and oils

- shortening
- aeration
- plasticity
- emulsification.

- the scientific principles underlying these processes when preparing and cooking food
- the working characteristics, functional and chemical properties of fats and oils.

3.3.2.4 Fruit and Vegetables	
<ul style="list-style-type: none"> • enzymic browning • oxidation. 	<ul style="list-style-type: none"> • the scientific principles underlying these processes when preparing and cooking food.
3.3.2.5 Raising agents	
<ul style="list-style-type: none"> • chemical (baking powder, bicarbonate of soda, self- raising ours which produce carbon dioxide) • mechanical (whisking, beating, folding, sieving, creaming and rubbing in – all incorporate air into the mixture) • steam is produced when the water in any moist mixture reaches boiling point • biological (yeast). 	<ul style="list-style-type: none"> • the scientific principles underlying these processes when preparing and cooking food • the working characteristics, functional and chemical properties of raising agents.

3.4 Food safety	
3.4.1 Food spoilage and contamination	
3.4.1.1 Microorganisms and enzymes	
<ul style="list-style-type: none"> • the growth conditions for microorganisms and enzymes and the control of food spoilage • bacteria, yeasts and moulds are microorganisms • high risk foods • enzymes are biological catalysts usually made from protein. 	<ul style="list-style-type: none"> • growth conditions for microorganisms: role of temperature, moisture, food and time • control of microorganism growth: temperature control, pH, water availability • high risk foods: ready to eat moist foods, usually high in protein that easily support the growth of pathogenic bacteria and do not require any further heat treatment or cooking • control of enzymic action: blanching of vegetables before freezing, use of acids to prevent enzymic browning.
3.4.1.2 The signs of food spoilage	
<ul style="list-style-type: none"> • enzymic action • mould growth • yeast action. 	<ul style="list-style-type: none"> • enzymic action: ripening of bananas, browning of some fruits • mould growth: e.g. on bread and cheese. Recognise the signs of mould growth on foods • yeast action on fruits e.g. grapes, strawberries and tomatoes.
3.4.1.3 Microorganisms in food production	
The use of microorganisms in food production.	<ul style="list-style-type: none"> • moulds in the production of blue cheese • yeasts to raise bread • bacteria in yoghurt and cheese production.
3.4.1.4 Bacterial contamination	
<ul style="list-style-type: none"> • the different sources of bacterial contamination • the main types of bacteria which cause food poisoning • the main sources and methods of control of different food poisoning bacteria types 	<p>Contamination from:</p> <ul style="list-style-type: none"> • other contaminated foods including the following raw foods: meat, poultry, eggs, seafood and vegetables • work surfaces and equipment

<ul style="list-style-type: none"> the general symptoms of food poisoning. 	<ul style="list-style-type: none"> the people cooking pests waste food and rubbish campylobacter e-coli salmonella listeria staphylococcus aureus.
---	--

3.4.2 Principles of food safety

Note: All temperatures and guidance in accordance with current Food Standards Agency (FSA) guidelines

3.4.2.1 Buying and storing food

<p>The food safety principles when To apply food safety buying and storing food.</p>	<ul style="list-style-type: none"> temperature control: freezing: -18°C chilling: 0 to below 5°C danger zone: 5 to 63°C cooking: 75°C reheating: 75°C ambient storage temperature danger zone correct use of domestic fridges and freezers date marks 'best before' and 'use by' dates covering foods.
--	--

3.4.2.2 Preparing, cooking and serving food

<p>The food safety principles when preparing, cooking and serving food.</p>	<ul style="list-style-type: none"> personal hygiene clean work surfaces separate raw and cooked foods and use of separate utensils correct cooking times appropriate temperature control including: defrosting and reheating appropriate care with high risk foods correct use of food temperature probes.
---	---

3.5 Food choice

3.5.1 Factors affecting food choice

3.5.1.1 Factors which influence food choice

To know and understand factors which may influence food choice.

the following factors in relation to food choice:

- physical activity level (PAL)
- celebration/occasion
- cost of food
- preferences
- enjoyment
- food availability
- healthy eating
- income
- lifestyles
- seasonality
- time of day
- time available to prepare/ cook.

Students must be able to cost recipes and make modifications.

3.5.1.2 Food choices

Food choice related to religion, culture, ethical and moral beliefs and medical conditions.

- food choice linked to the following religions and cultures: Buddhism, Christianity, Hinduism, Islam, Judaism, Rastafarianism and Sikhism
- food choice linked to the following ethical and moral beliefs: animal welfare, fairtrade, local produce, organic, Genetically Modified (GM) foods
- food choice linked to food intolerances (gluten and lactose) and the following allergies: nuts, egg, milk, wheat, fish and shell fish.

3.5.1.3 Food labelling and marketing influences

How information about food available to the consumer, including labelling and marketing, influences food choice.

- mandatory information included on food packaging in accordance with current European Union and Food Standards Agency (FSA) legislation
- non-mandatory information: provenance, serving suggestions
- how to interpret nutritional labelling
- how food marketing can influence food choice e.g. buy one get one free, special offers, meal deals, media influences, advertising, point of sales marketing.

3.5.2 British and international cuisines

- food products from British tradition and two different cuisines
- schools or colleges/students can select different cuisines to study.

Cuisine is defined as: 'a style characteristic of a particular country or region where the cuisine has developed historically using distinctive ingredients, specific preparation and cooking methods or equipment, and presentation or serving techniques'.

- distinctive features and characteristics of cooking
- equipment and cooking methods used
- eating patterns
- presentation styles
- traditional and modern variations of recipes.

3.5.3 Sensory evaluation

- sensory testing methods how taste receptors and olfactory systems work when tasting food.

- importance of senses when making food choices: sight, taste, touch and aroma
- preference tests: paired preference, hedonic
- discrimination tests: triangle
- grading tests: ranking, rating and pro ling
- how to set up a taste panel
- controlled conditions required for sensory testing
- evaluating how senses guide
- evaluating a wide range of ingredients and food from Britain and other countries
- how to test sensory qualities of a wide range of foods and combinations.

3.6 Food provenance

3.6.1 Environmental impact and sustainability of food

3.6.1.1 Food Sources

Where and how ingredients are grown, reared and caught.

- grown ingredients: fruits, vegetables and cereals
- reared ingredients: meat and poultry
- caught ingredients: fish
- an understanding of:
 - organic and conventional farming
 - free range production
 - intensive farming
 - sustainable fishing
- advantages and disadvantages of local produced foods, seasonal foods and Genetically Modified (GM) foods.

Environmental issues associated with food.

- seasonal foods
- sustainability e.g. fish farming
- transportation
- organic foods
- the reasons for buying locally produced food
- food waste in the home/food production/retailers
- environment issues related to packaging
- carbon footprint.

3.6.1.3 Sustainability of food

- the challenges to provide the world's growing population with a sustainable, secure, supply of safe, nutritious and affordable high- quality food.

Students must have an awareness of:

- climate change
- global warming
- sustainability of food sources
- insufficient land for growing food
- availability of food
- Fairtrade
- problems of drought and flooding
- Genetically Modified (GM) foods
- food waste.

3.6.2 Food processing and production

3.6.2.1 Food production

- primary and secondary stages of processing and production
- how processing affects the sensory and nutritional properties of ingredients.

- primary processing related to the: rearing, fishing, growing, harvesting and cleaning of the raw food material (milling of wheat to our, heat treatment of milk, pasteurised, UHT, sterilised and micro- filtered milk)
- secondary processing related to: how the raw primary processed ingredients are processed to produce a food product (flour into bread and/ or pasta, milk into cheese and yoghurt, fruit into jams)
- loss of vitamins through heating and drying
- the effect of heating and drying on the sensory characteristics of milk.

3.6.2.2 Technological developments associated with better health and food production

Technological developments to support better health and food production including fortification and modified foods with health benefits and the efficacy of these.

- cholesterol lowering spreads
- health benefits of fortification
- fortified foods: thiamin, niacin, calcium and iron added to white flour
- folic acid and iron added to breakfast cereals
- vitamins A and D added to fats and low fat spreads
- the positive and negative aspects of the use of additives: colourings, emulsifiers and stabilisers, flavourings, and preservatives
- the positive and negative aspects of Genetically Modified (GM) foods.
